

Questions/Answers for RFP

Acquisition of Digital Orthophotography

Jefferson County Wisconsin

Q1. Could we get a digital boundary file for the project areas?

A1. A digital boundary shape file for the project areas has been posted for download with the RFP

Q2. What spatial reference/coordinate system would you like to use for your project?

A2. NAD 1983 HARN StatePlane Wisconsin South Zone FIPS 4803 (US Feet)

Q3. Is there existing ground control available for this project?

A3. If you mean photo identifiable ground control points with survey coordinates, the answer is no. We do have a series of control monuments that are spaced about every three to four miles throughout the county. We might be able to provide some of the survey work to collect photo identifiable ground control points, but would like a cost for it to be done completely by the contractor.

Q4. Would you have a file showing the coordinates of the control monuments?

A4. A monument location shape file has been posted with the RFP. This is kind of an old file so updated coordinates should be downloaded from NGS to actually perform the survey. The file does give a picture of the monument spacing. They are blue booked with NGS.

Wisconsin DOT has WISCORS (Wisconsin Continuously Operating Reference Stations) that would assist in the survey work as well.
